- Convenient and economically "**packaged in the Rainbow Array™**"
 - Available in a **12 and 18 count** package

Case Study:

St. Joseph HealthCare Center for Weight Loss Surgery,
Lexington, Kentucky

One of the most comprehensive weight loss surgery programs in the country, St. Joseph's Bariatric Program is making a tremendous impact in the Bluegrass State, which ranks in the top ten for morbid obesity. Three board-certified surgeons, two internists and a full-time registered dietitian provide care for patients before, during and after surgery to ensure a successful transition from a life of morbid obesity.

St. Joseph has incorporated Budget Saver Sugar-Free Pops into its highly-effective post-op surgery treatment. Introducing the blue raspberry and grape pops within the first 48 hours of surgery, St. Joseph's physicians can assess the patient's tolerance of the surgery, as well as monitor the fluid collection pouch for signs of leakage. This precautionary step, with the help of economical Budget Saver Sugar-Free Twin Pops, ensures happy patients who go on to live long and healthy lives.
